Find a ride.
Just make a call.

A voice assistant that connects spoken addresses to suitable rides in mobie.

Find a ride by phone.

A passenger describes a journey.
The assistant finds a ride and sends a request.

> „Ich möchte von Villagarten 4 in Steyregg zur Bethlehemstraße in Linz fahren.“

Passenger
Calls Fonio

→

Assistant
Finds a ride

→

Passenger
Confirms the request

→

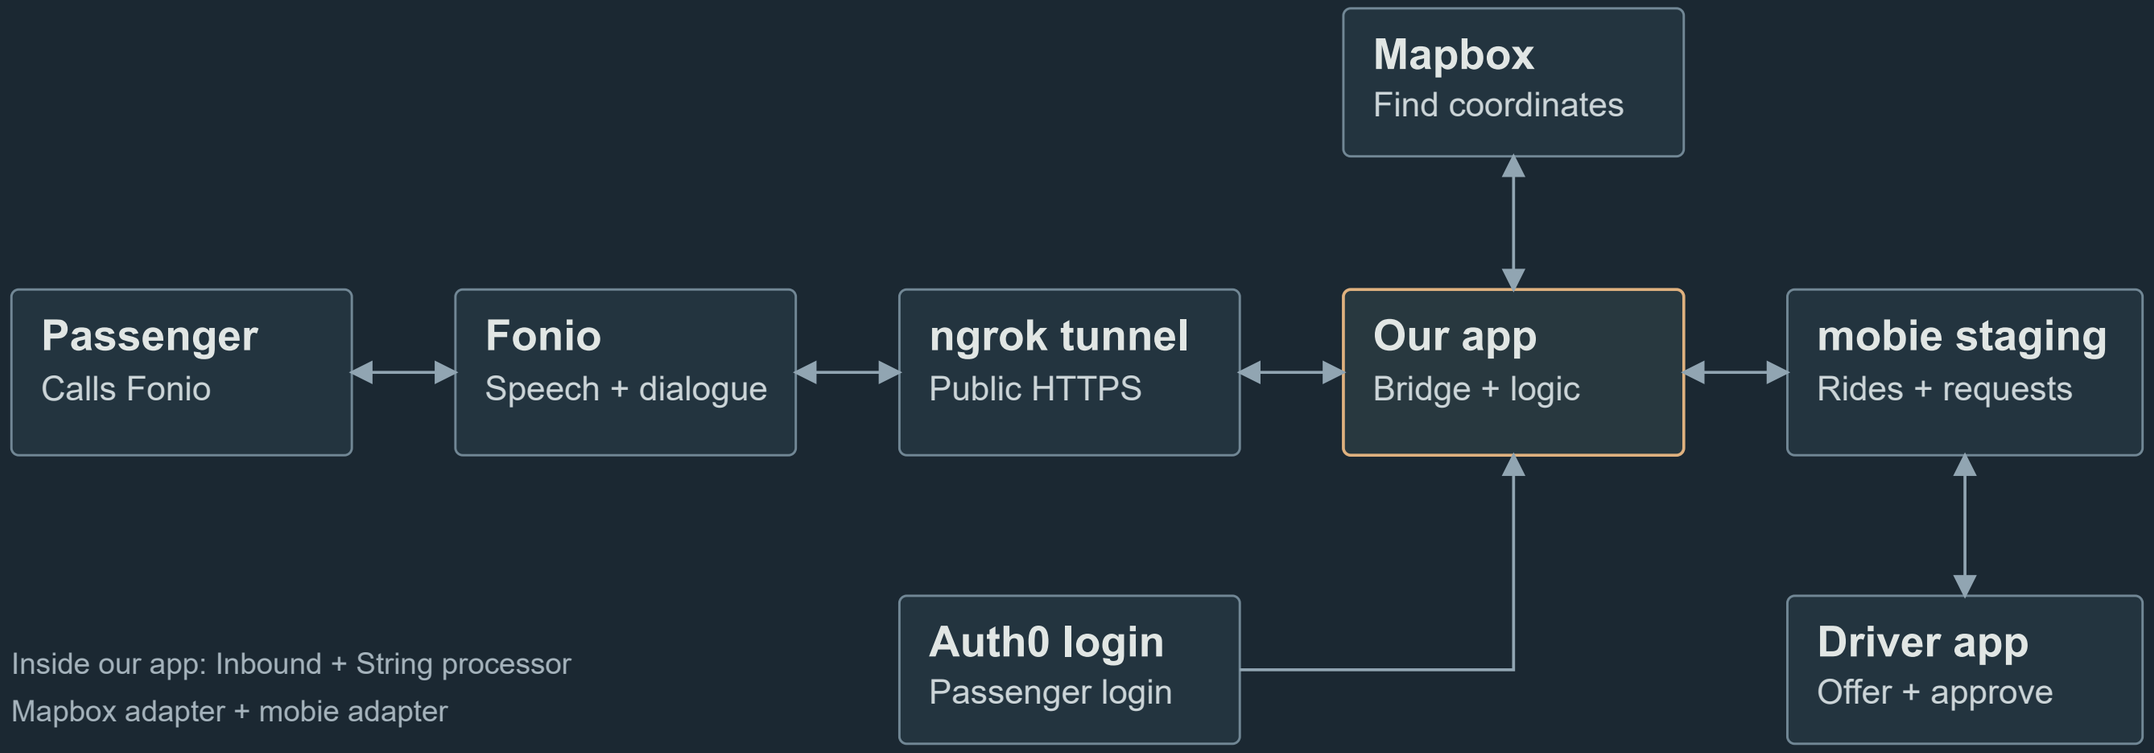

Driver
Approves in the app

One phone conversation. Two people. A real request in mobie staging.

THE OVERALL ARCHITECTURE

From phone call to ride request.

Fonio reaches our app through ngrok. Our app connects Mapbox and mobie.

Implemented in code

Input normalisation → geocoding → ride search / join

Next implementation

Guided clarification + difficult-name matching

The street and the town must both be right.

Three ways a spoken request can lead to the wrong location.

01

Wrong street + town

CALLER INPUT

“Villagarten 4, Steyregg”

POTENTIAL WRONG RESULT

Gartenstraße, Sulz

Check the street within the intended town.

02

Multiple valid options

CALLER INPUT

“Gartenstraße”

POSSIBLE LOCATIONS

A: Gartenstraße, Sulz
B: Gartenstraße, Klaus

Ask which place is intended instead of taking the first match.

03

Misheard town or street

CALLER INPUT

“Steyregg”

SYSTEM HEARS

“Steiregg”

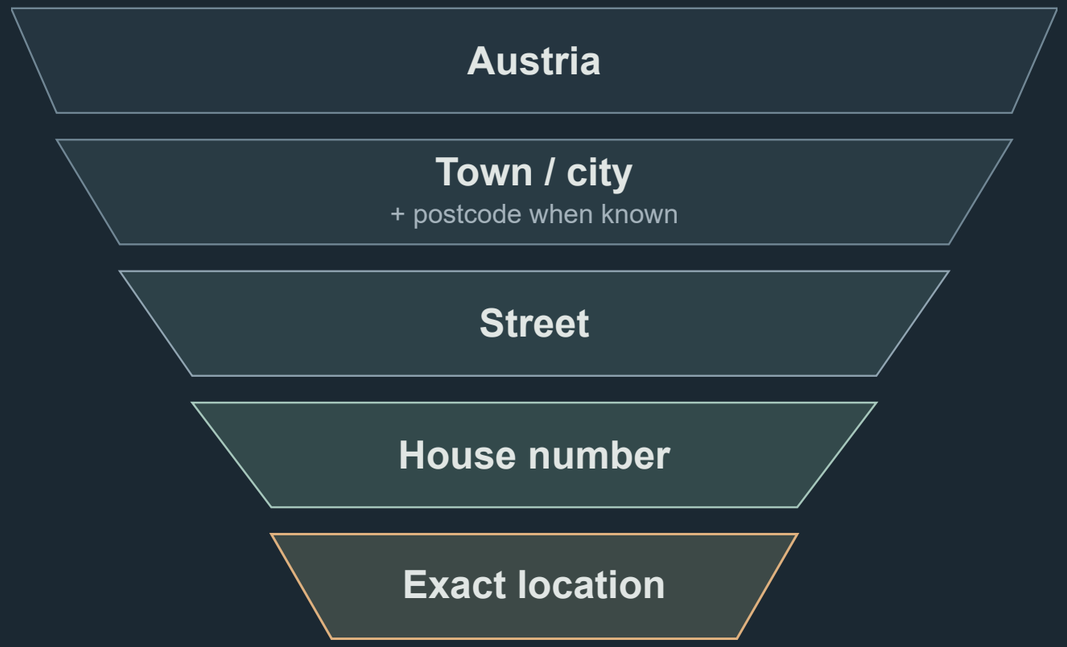

Look for similar names, then clarify if needed.

Our goal: the intended street in the intended town, with ambiguity resolved.

From the right address to the right ride.

The town narrows the street search. A short choice resolves several valid matches.

01 · Right street, right town

For your starting point and destination.

Find a ride

“What day, what time, and how many people?”

Search for a ride between the two places that fits your plans.

You decide

“Shall I send the request?”

Hear the trip, pickup time and driver details before you agree.

02 · Multiple valid options? We offer a short choice and let you decide.

Already told us a detail? We use it. The driver still needs to approve the request.

Similar spelling helps us find the name.

Count the letters to add, remove or change. Fewer changes mean a closer spelling.

WHAT THE SYSTEM HEARS

Steiregg

A SIMILAR REAL TOWN NAME

Steyregg

One letter changes: i becomes y.

An illustrative suggestion, not an automatic correction.

1 **Find similar names**

Compare the heard name with real town or street names.

2 **Keep the right area**

Use the postcode when known. Look for streets within the chosen town.

3 **Clarify the suggestion**

“Did you mean Steyregg?”
Let the caller resolve uncertain matches.

Similar spelling helps suggest a place. It cannot prove what the caller meant.
